- assembled with polyurethane cushion - 91968 and 91969.
- 1x transmission mount 91686
- 2x 7/16 bolts
- 2x flat washers
- 2x spring washers

- Raise vehicle evenly and safely support.

Never rely on a Jack only

- Start by disconnecting battery.

Note - an engine stand/cradle will be required to support engine. Alternatively support engine with timber. careful to not damage engine sump.

- Un-bolt old mounts from engine block and K-frame.

IMPORTANT- new mounts may lift engine once installed - check for any clearance issue - including exhaust and bonnet.

- Proceed to bolt up new mounts.

Check engine block bolt condition
- replace with new bolts if needed.

Refer Page 2

It is recommended that a licenced workshop or tradesperson carry out the above procedure and that workshop manual and relevant safety procedures are followed in addition to the above.

Install Guide

Motor Mounts and Transmission Mounts - Ford Mustang 5.0

Continued - Transmission Mount -

- Support transmission with a Jack and timber.
- Remove old rubber mount.

Note - 2x new bolts are supplied for the transmission mounting point. Check cross-member condition - check for any small cracks.

Also - check the holes/slots for mounting bolts - these may need to be filed/cleaned up.

- For big HP cars, the use of loctite may help.
- Re-use the floor mounting bolts. If these are of poor quality, best to replace them.
- Re-check all bolts after 200kms travelled.
